

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A device to eliminate trimmings or scraps from series of products comprising at least one continuous movable flexible member carrying a series of contact members for the products aligned with one another, a section of said movable flexible member being devoid of said contact members to allow trimmings to fall; at least one longitudinal supporting element of the products, parallel to said movable flexible member, a reciprocal position of said flexible member and of said longitudinal supporting element being such that the products advance in contact with and supported by the contact members of the flexible member and with the longitudinal supporting element; at least one pusher to insert the series of products with respective trimmings between said flexible member and said longitudinal supporting element; wherein said flexible member is controlled with a cyclically variable speed to carry the section thereof devoid of contact members every time to a level of tail and head trimmings of two consecutive series of products.

2. (Currently Amended) Device as claimed in claim 1, wherein said longitudinal supporting element is ~~fixed~~ stationary.

3. (Canceled).

4. (Currently Amended) Device as claimed in claim ~~3~~ 46, wherein said continuous flexible member has at least one second contact member designed to grasp at least a first product of each series and make the first product advance.

5. (Previously Presented) Device as claimed in claim 1, wherein at least some of the contact members are provided with a contact surface for the products having a low friction coefficient, to allow said products to slide with respect to said at least one longitudinal supporting element.

6. (Previously Presented) Device as claimed in claim 1, wherein said flexible member is controlled at a variable speed to accelerate at least a last product of each series with respect to the pusher therebehind.

7. (Previously Presented) Device as claimed in claim 1, wherein said flexible member is controlled at a variable speed to accelerate and, optionally, subsequently decelerate, at least a first product of each series with respect to a subsequent product.

8. (Previously Presented) Device as claimed in claim 1, wherein said flexible member is controlled to advance at a lower speed or to stop during an interval of time between arrival of a first product and arrival of a last product of

each series, during said interval of time the products being pushed by said pusher and sliding along the flexible member resting on the contact members.

9. (Currently Amended) Device as claimed in claim ~~3~~ 46 or 4, wherein one or more of said contact members disposed at each end of the series of contact members carried by said flexible member, adjacent to said portion of the flexible member devoid of contact members, can be operated to have a grasping effect on the products in contact therewith.

10. (Currently Amended) Device as claimed in claim ~~3~~ 46 or 4, wherein said contact members designed to grasp said products are mounted movable, with respect to the flexible member which carries the contact members, at least in a direction essentially orthogonal to said flexible member.

11. (Currently Amended) Device as claimed in claim ~~3~~ 46 or 4, wherein the contact members designed to grasp the products have a movable portion.

12. (Previously Presented) Device as claimed in claim 11, wherein a fixed control profile acts on said movable portions, an elastic element being provided to hold each of said movable portions in contact with said fixed control profile.

13. (Previously Presented) Device as claimed in claim 1, wherein said flexible member and said longitudinal supporting element are arranged one above the other.

14. (Canceled).

15. (Previously Presented) Device as claimed in claim 13, wherein said flexible member is laterally staggered with respect to said longitudinal supporting element.

16. (Previously Presented) Device as claimed in claim 13, wherein said longitudinal supporting element is positioned under said flexible member.

17. (Previously Presented) Device as claimed in claim 1, wherein said flexible member is controlled to be accelerated synchronously with a position of said pusher, to distance a last product of each series from the pusher therebehind.

18. (Previously Presented) Device as claimed in claim 1, wherein said flexible member is controlled to be accelerated synchronously with a position of said pusher, to distance a first product of each series at least temporarily from a subsequent product.

19. (Previously Presented) Device as claimed in claim 1, wherein said flexible member includes a pair of parallel chains, one of said chains being provided with a plurality of intermediate contact members, said intermediate contact

members being arranged in a laterally staggered position with respect to said longitudinal supporting element.

20. (Currently Amended) Device as claimed in claim 3, 46 wherein said first contact member designed to grasp at least the last product of each series of products includes two shoes and means are provided to control a grasping motion of said shoes.

21. (Previously Presented) Device as claimed in claim 4, wherein said second contact member designed to grasp at least the first product of each series of products includes two shoes and means are provided to control a grasping motion of said shoes.

22. (Previously Presented) Device as claimed in claim 20, wherein the two shoes of said first contact member are controlled by a fixed cam profile, which controls a closing motion of said shoes.

23. (Previously Presented) Device according to claim 20, wherein said flexible member includes a pair of parallel chains, one of said chains being provided with a plurality of intermediate contact members, said intermediate contact members being arranged in a laterally staggered position with respect to said longitudinal supporting element and wherein each shoe of said first contact member is carried by a respective one of said chains.

24. (Previously Presented) Device as claimed in claim 4, wherein at least one of said first contact member or said second contact member designed to grasp said products includes jaws- or pliers-shaped grasping members.

25. (Withdrawn) Device as claimed in claim 1, wherein said at least one pusher has a slot in which the longitudinal supporting element penetrates when said pusher pushes the products between the longitudinal supporting element and the flexible member.

26. (Previously Presented) Device as claimed in claim 1, wherein said products are rolls obtained from cutting a log.

Claims 27-43 (Canceled).

44. (Previously Presented) Device according to claim 21, wherein said flexible member includes a pair of parallel chains, one of said chains being provided with a plurality of intermediate contact members, said intermediate contact members being arranged in a laterally staggered position with respect to said longitudinal supporting element and wherein each shoe of said second contact member is carried by a respective one of said chains.

45. (New) A device to eliminate trimmings or scraps from series of products sequentially introduced into said device, comprising at least one continuous movable flexible

member carrying a series of contact members for the products aligned with one another, a section of said movable flexible member being devoid of said contact members to allow trimmings to fall; at least one longitudinal supporting element of the products, substantially parallel to said movable flexible member, a reciprocal position of said flexible member and of said longitudinal supporting element being such that the products advance in contact with and supported by the contact members of the flexible member and the longitudinal supporting element at least one pusher to insert the series of products with respective trimmings between said flexible member and said longitudinal supporting element; wherein said flexible member is controlled with a cyclically variable speed, such that every time a new series of products is introduced into the device said section of said flexible member devoid of contact members is caused to be phased with positioning of tail and head trimmings of two consecutive series of products.

46. (New) A device to eliminate trimmings or scraps from series of products comprising at least one continuous movable flexible member carrying a series of contact members for the products aligned with one another, a section of said movable flexible member being devoid of said contact members to allow trimmings to fall; at least one longitudinal

supporting element of the products, parallel to said movable flexible member, a reciprocal position of said flexible member and of said longitudinal supporting element being such that the products advance in contact with the contact members of the flexible member and with the longitudinal supporting element; at least one pusher to insert the series of products with respective trimmings between said flexible member and said longitudinal supporting element; wherein said flexible member is controlled with a variable speed to carry the section thereof devoid of contact members every time to a level of tail and head trimmings of two consecutive series of products; and wherein at least one of said contact members is constructed and arranged to cyclically mechanically grip and release at least a last product of said series of products.

47. (New) Device according to claim 46, wherein said at least one of said contact members is structured to cyclically co-act with an activation member to mechanically grip and release said at least a last product of said series of products.
